

Supplementary Material

Auditing Frozen Foundation-Model Embeddings under Distribution Shift

Zeyu Fu

All figures and tables previously held here have been incorporated into the main manuscript. The consolidated article is self-contained: the external context figure (meta-analysis, leave-one-batch-out reproduction, and integration trade-off), the naive linear-probe metric-artifact view, the two cluster-K reliability figures, the scATAC combined comparison/reliability table, the per-family parity and null-partition table, and the contributing-studies table now appear inline in the main text. No supplementary content remains.
